

1st Stage Starter Diet

Product: goldSTART is a simple milk based pellet containing gelatinized starches and highly digestible milk and fish proteins

Pack Size: 50 lb Bags. Also available in 1,200 to 2,000 lb totes.

Form: 2 mm pellet

Use Rate: Feed at the rate of 1.0 lb per pig to pigs weighing less than 11 lbs

Features:

- Highly digestible cooked cereal grains combined with plasma, fish meal and milk products.
- Formulated to exact nutritional specifications
- Low in crude protein—but optimum levels of amino acids
- Food grade ingredients are often used to help the piglets digestive system
- goldSTART is pelleted using European technology that assures high pellet durability and remains soft enough to be easily chewed by the newly weaned pig.

Purpose: goldSTART is designed to get piglets off to a fast start during the first few pounds of gain in the nursery..

Benefits:

- Highly digestible diet promotes feed intake
- Improved weight gain and feed efficiency
- Fewer digestive upsets due to poor intakes and low digestibility.

Remarks: Keep feed fresh. Do not store in nursery rooms.

Feeding Directions: Ideal diet for pigs under 10 lbs. All weaned pigs need at least 1 lb of goldSTART or sure START depending on weaning age and body weight. Change gradually onto easiSTART or multiSTART as soon as pigs are 10 lbs.

We recommend small quantities of fresh food frequently, not allowing feed to get stale. Any change in diet should be made over 3-4 days to minimize the risk of digestive up sets. Also changes of food should not be within 3 days of weaning.

It is important to give piglets an abundant, clean source of fresh water.
