

- Product:** Safe Start is a convenient blend of Sonic and first stage starter pellet. Safe Start is designed to be fed during the first two days after weaning.
- Pack Size:** 25 lb Bag
- Form:** Meal and 2 mm pellet mixture
- Use Rate:** Fed at the rate of 8 ounces per pig post weaning.
- Features:** Formulation of concentrated milk proteins, herring meal and porridge oats supplemented with gut conditioners, macro and micro minerals, vitamins and attractants. One 1/2 lb of Safe Start contains .3 lbs of first stage starter pellet.
- Purpose:** Designed to conveniently get pigs off to an easy transition from weaning to pellets.
- Benefits:** Reduces weight variation by ensuring that all pigs get started on feed quickly.
- Remarks:** Keep feed fresh. Do not store in nursery rooms.
- Feeding Directions:** Budget a 25 lb bag of Safe Start for every 50 pigs in the nursery (1/2 lb per pig).
- Provide only water for the first hours after weaning.
 - Offer small quantities of Safe Start several times per day for the first few days in the nursery.
 - After pigs have consumed 1/2 lb each of Safe Start, continue feeding with the appropriate Eu-Tec starter diet based on pig weight and weaning age. Always provide fresh water in cups or dripping nipple waterers for newly weaned piglets. Water intake will drive feed intake.
- Cost Benefits:** Each 1.0 lb of extra weight at the end of the nursery is equivalent to and extra 2.0 lb at market or less 1 day to market. If 2 days to market are saved, feeding SafeStart will save \$0.40/pig marketed in feed savings alone.
