

Piglet Milk Replacer

Product: milkSTART is a specially formulated all milk blend designed to be mixed with warm water and fed to nursing or orphan piglets.

Pack Size: 25 lb Bag

Use Rate: Mix 16 ounces of milkSTART per gallon of warm water.

Features: Formulation of milk proteins, high quality fats and coconut oil. Acidified to improve digestion and retain freshness. Fortified with optimum vitamins and minerals specifically for baby pigs.

Purpose: Designed to supplement sows milk and raise orphan pigs. Can also be used for very early weaned pigs.

Benefits: Increases weaning weights, reduces pre-weaning mortality

Remarks: Keep milkSTART fresh, close each bag after use. Do not store in farrowing rooms.

Feeding

Directions: Mix Eu-Tec milkSTART at the rate of one pound (16 oz) per gallon of warm water. For best results, water should be 110° to 120° F at mixing and room temperature to 100° F at feeding.

Piglets should receive at least one nursing of colostrum if possible.
Sanitation is important. Be sure all feeding equipment is cleaned each day.

Hand Feeding:

- Provide fresh milkSTART at each feeding in a shallow pan.
- Provide enough trough space so that all pigs can eat at once.
- Be sure piglets have enough milkSTART to last until next feeding
- Feed as often as possible – 4 times/day for the first week, 3 times per day for the second week, and at least 2 times per day during the 3rd week.
- Provide Eu-Tec goldSTART and fresh water before the end of the first week.

Machine Feeding:

- Follow machine manufacturer mixing directions.
- Replace mixed milkSTART at least once per day.
- Keep milkSTART available to the piglets at all times.
- Rinse regularly and sanitize per manufacturer recommendations.
- Be sure that machine is dispensing the correct amount of milkSTART daily.
