

The Natural Performance Enhancer

DeviGuard was developed after extensive evaluation of various components in the Devenish trial facilities using conventional diets.

DeviGuard encourages the balance of micro flora in the intestine. This helps to maintain a healthy and stable gut environment that allows animals to make maximum use of the nutrients in their feed.

DeviGuard contains a uniquely balanced mixture of encapsulated fatty acids. This ensures that they get to where they are required—in the right place at the right time!

DeviGuard helps young pigs make the transition through the weaning and early growing period. DeviGuard:

- Is beneficial to the development of the weaned pig's immature digestive system
- Contains Omega 3 fatty acids which have been known to reduce inflammation associated with the body's immune response to infection
- Selectively steers the gut flora towards beneficial bacteria
- Contains ingredients which have been shown to aid in bio regulation of gut function which may help to optimize feed efficiency and allow the young pig to digest its diet with fewer digestive upsets

Product Description

DeviGuard is a blend of encapsulated salts of volatile fatty acids and encapsulated essential fatty acids. It is a light grey to tan coated product and is packaged in 50 lb (22.69 Kg) bags. Store in a cool, dry place and use within 1 year of manufacture.

Directions for Use

For challenged pigs **DeviGuard** should be used from weaning through finish. Mix in complete feed at the following rate or as directed by your nutrition representative.

Recommended inclusion per ton:

Prestarters and starter feed	6 lbs
20—40 lbs body weight	4 lbs
40—80 lbs body weight	2 lbs
80lbs body weight—to market	1 lb
Gestating sows	2 lbs
Lactating sows.....	2 lbs
